

# What is a Segue

- Segues are how you travel between one scene to another scene and send and receive data back
- To add a row we need to create a View Controller that can accept data. A Text Box.
- When we hit "SAVE" it should come back to our main parent but with our newly added todo item.
- Again these are functions provided to us by IOS. We need to use them correctly and most of the work is done already.
- We will create a new View Controller to Add data. Lets do it!!
