

Arrays and Loops - Collection Types

What is an array? How can we create one in Swift?

```
var array_of_names = ['Radhika', 'Karthika', 'Aria', 'Sally', 'John', 'Mindy']  
  
for name in array_of_names:  
    print("Hello \(name)! How are you doing today?")
```

So we created an Array and we looped over each item in the array

```
var array_for_future = Array<String>()  
  
array_for_future.append("Radhika")  
array_for_future.append("Aria")
```

Another way to add items into an Array. Read more on Arrays when you have time.
